

EverSmart™ Pest

Integrated Pest Management Defined

EverSmart™ Pest

Powered by Microshare®

From rodents to flying insects, cockroaches, beetles to bedbugs, **EverSmart™ Pest** brings the AI-driven power of the Microshare Platform to a wide range of pests, producing sensor alerts and field camera imagery that brings precision to remote monitoring in Pest Control.

TABLE OF CONTENTS

-  **EverSmart™ and IPM**
AI-filtered sensor data, field camera images and video provide precision remote monitoring data that arm technicians with preventative data on a wide range of pests, a key to Integrated Pest Management (IPM).
-  **Rodent**
Remote monitoring for rats and mice designed to retrofit existing bait station and trap inventory. AI-filtering bundles alerts and images from sensors and cameras to filter out data overload and false positives.
-  **Flying Insect**
Monitors buildup of flying insects with a mini-camera to retrofit most commercial light traps.
-  **Crawling Insect**
Our mini-camera monitors for crawling insect traps with AI-filtered results to detect surges, trap status and species.
-  **Bedbug**
Pheromone-baited traps kill bedbugs and monitors bait potency to alert technicians when service or renewal is required.

The definitive technology for Integrated Pest Management

product suite

EverSmart™ Pest: Integrated Pest Management defined

EverSmart™ Pest’s comprehensive Rodent solution provides a 24/7 record of rodent activity, revealing patterns and giving PCOs a new predictive and preventative response capability along with recommended actions and workflow management.

‘Remote monitoring data from EverSmart is at the top of the value chain for customers and PCOs.’

Dr. Bobby Corrigan
Renowned urban rodentologist and consultant to NYC, Boston and major corporations.

The EverSmart™ Pest product suite

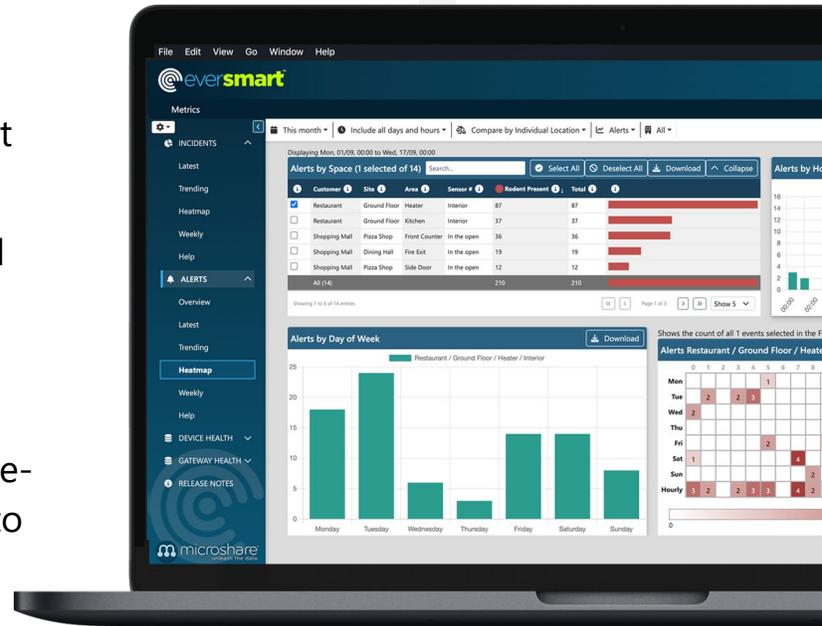

EverSmart™ Pest – Rodent

Advanced simplicity: The world’s most powerful IPM technology combines AI-filtered sensors and field cameras for precision, labor and cost savings.

- Remote data not only tells you what to do, but also what you don’t have to do: Checking idle traps!
- It also ensures you visit customers when it matters rather than on a set routine
- Rodent activity patterns, transit paths and sudden surges can be detected and stopped early
- Whether retrofitting existing traps or bait stations or deploying sensors “outside-the-box,” EverSmart minimizes upfront costs to maximize results.

Field camera integration

Integrate Tactacam™ and other popular trail cameras into EverSmart™ dashboards, complete with our full AI-filtered and bundled output. No more scrolling through useless images!

Todd Leyse
CEO, Adam's Pest Control

'This system really is the best. Most of that data goes up to the cloud and the server in the backend to help weed out those false positives and false negatives. That's a smart way to go for a platform, keep the device costs lower, do a lot of that processing in the background.'

ADAM'S
PEST CONTROL, INC.

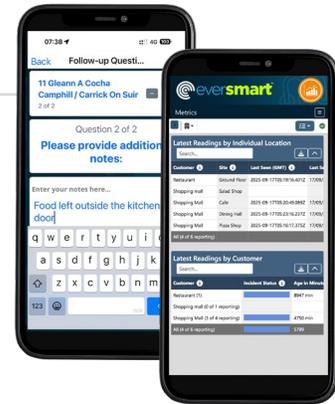

The EverSmart™ Pest product suite

EverSmart™ Pest – Flying Insect

In keeping with EverSmart™ business-ready approach to technology, our Flying Insect monitoring system does not require you to swap out your inventory or buy expensive proprietary hardware. We designed EverSmart™ Pest’s Flying Insect camera to retrofit an array of popular models.

When retrofitted with an EverSmart™ Pest-ready trail camera, virtually any commercial insect light trap – LED, UV or fluorescent – can be turned into an AI-driven tool that ensures that you, and not your customer, will be the first to know about changes in insect activity patterns.

EverSmart™ Pest – Crawling Insect

For some, insects are a nuisance. But for Restaurants, Hotels, Retail, Food Production and Storage, Schools, Warehousing and luxury Multifamily Real Estate assets, they can damage reputations, threaten customer loyalty and even invite fines and business interruptions from government regulators.

Here's how it works:

The EverSmart™ Pest product suite

EverSmart™ Pest – Bedbug

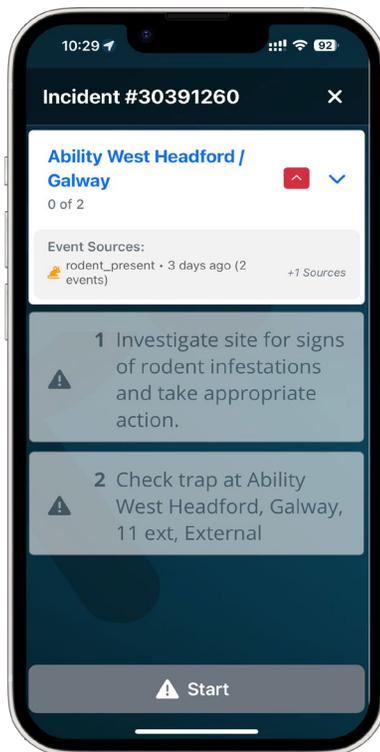

Bedbugs – or the threat of them – haunt the facilities managers of hotels, dormitories, cinemas and even Airbnb landlords. Fully integrated into EverSmart™ Pest, our Bedbug solution monitors the brief potency lifespan of the pheromone packs to alerts PCOs when they need to be renewed.

Bedbug lure pack alerts in the React-M app

Holiday Inn
Seaford: Rm 63,
Replace bait

Holiday Inn
Seaford: 12 bait
expire 30 days

Holiday Inn
Seaford: 37 bait
within 60 days

- Scientifically proven pheromone bait has a ninety-day lure potency
- Lures and traps all life stages of unfed or blood-fed bedbugs
- Ultra-thin for discreet placement beneath mattresses, furniture cushions or under upholstery
- EverSmart™ provides alerts when pheromone bait requires renewal
